Thanks to their safe nature, lithium-ion batteries are common in solar generators. Different voltage sizes of lithium-ion batteries are available, such as 12V,24V, and 48V. The lithium-ion battery voltage chart lets you determine the discharge chart for each battery and charge them safely.

#### Do all lithium batteries have a voltage of 3.7 volts?

No,not all lithium batteries have a voltage of 3.7 volts. Lithium batteries come in various voltages depending on their chemistry and configuration. For instance, lithium-ion batteries can have voltages ranging from 3.2V to 3.7V per cell. In contrast, lithium iron phosphate (LiFePO4) batteries typically operate around 3.2V per cell.

### What should you know about lithium ion batteries?

The most important key parameter you should know in lithium-ion batteries is the nominal voltage. The standard operating voltage of the lithium-ion battery system is called the nominal voltage. For lithium-ion batteries, the nominal voltage is approximately 3.7-volt per cell which is the average voltage during the discharge cycle.
