24 inverter changed to 12V

Currently there is a mish mash of panels that go into a PWM charge controller and then into 4 x 6v FLA batteries. They are wired to give 12V which then goes into a Samlex 12v to 120v 3000w inverter. There is also a number of 12v lighting circuits and a 12v water pump being run off the 12v feed and a 12v breaker.

What we were possibly considering was replacing the whole power converter setup with a Sungoldpower 24 volt 2000w inverter and then using a 24 to 12 volt buck converter to drop the voltage for the 12 volt ...

On 12 volt inverter, I warmed meals up on a microwave for two minutes five or six times a day, but not cook for 20 minutes pulling about 2000 watts and 175 amps from the battery. At 24 volt inverter, I run close to 2000 watts at 75 amps for hours on end. I like 24 volts much better, and my RV DC electronics is run off 12 volts.

The only way to do what you are suggesting would be to still have a 12v battery/bank attached to the inverter, and use a smaller step down converter simply to charge the 12v from the 24v pack. This may or may not be a viable idea depending on the rest of the setup.
