I In ideal conditions, a 1kW system will generate around 4 units daily. Thus, a 500kW system in perfect situations can generate at least 500*4= 2000 units (2 MWh) in a day and 60000 units (60 MWh) in a month. However, these are ideal figures. The actual generation can be much higher or much lower than these figures. For example, in sunny seasons, a plant might ...
