Air pockets can expand when the panel heats up, damaging the panels and the RV roof. 4. Interconnect All Panels. Whether you have multiple flexible panels or a combination of flexible and rigid options, you"ll need to ...

Solar panels are typically mounted on metal racks, which are in turn anchored to the roof surface. The installers that Kaster has spoken with are apparently insisting that fasteners attaching the rack-mounting points to the roof go all the way through the sheathing and into a rafter. But how to find them? Mark Nagel suggests a couple of approaches.

The racking system provides the foundation of your solar panels. They are the primary components that will be directly mounted onto your roof structure, ensuring they are aligned correctly and securely fastened. Attaching the mounting system directly to your roof's rafters is one of the most reliable methods for installation.
