Can a supercapacitor electrostatic energy storage withstand a chemical reaction?

Many modern lithium-ion batteries are unable to achieve that because of the chemical reactions taking place in them. There is no chemical reactiontaking place in the supercapacitor electrostatic energy storage by Emtel Energy. Emtel Energy is the proud global distributor of Enercap Power Industries LLC.

How does EnCap energy storage work?

Encap energy storage by Emtel stores energy electrostatically. On the other hand, conventional lithium-ion batteries store energy electrochemically. No chemical reaction in the Encap energy storage solution due to which the module will not be degraded and run for many years. Lithium Batteries degrade faster losing their efficiency over time.
