HV inverters. To power motors or other devices, high-voltage inverters convert direct current (DC) from batteries or generators to alternating current (AC). With nominal DC voltage up to 1 kV and maximum power up to 300 kW each, our inverters support a variety of applications including traction drives, grid connections, and island grids.

High voltage DC rated isolators and breakers are more expensive and difficult to source. Finally, if your panels happen to leak when it rains, there is a tendency for this leakage current to push up the bus voltage, so inverters can trip off with fault code 08 (bus voltage too high). Search this and other forums for examples.
