Battery energy storage systems are installed with several hardware components and hazard-prevention features to safely and reliably charge, store, and discharge electricity. Inverters or Power Conversion Systems (PCS) The direct current (DC) output of battery energy storage systems must be converted to alternating

A parallel connection of battery cells forms a logical cell group, and these groups are then connected in series. The connected battery cells and the BMS, sometimes with a PCS, form battery modules. Several modules create a battery rack, and multiple racks are connected to form battery banks or arrays, constituting the battery side of the system.
