What is an Energy Storage System (ESS)?

An Energy Storage System (ESS)is a specific type of power system that integrates a power grid connection with a Victron Inverter/Charger, GX device, and battery system. It stores solar energy into your battery during the day for use later on when the sun stops shining.

What is an ESS system?

At its core, an ESS system (which stands for Energy Storage System) is to help solve one of the biggest issues in energy management - the difference in energy generation and energy consumption. Energy in both renewable and non-renewable sources is often generated when we don't need it excessively and then is utilized when the demand is high.
