

What is an uninterrupted power supply system (UPS)?

Uninterruptible Power Supply Systems (UPS System) are critical components designed for data centers and server rooms. UPS system is to provide backup power to critical IT infrastructure, ensuring uninterrupted operations and maximum uptime.

What is ups & how does it work?

Online (Double Conversion) UPS: The system continuously runs on battery power, providing seamless protection against grid anomalies. Customers can choose the appropriate backup power batteries and uninterruptible power supply systems based on their server requirements.

What is a server room UPS system?

In most cases server room UPS systems will be of the online double conversion type, although line-interactive UPS can also be used in certain rackmount applications. As computing requirements grow, so will a server room's power requirements.

Why does NewTech offer uninterruptible power supply (UPS)?

At Newtech, we understand the critical importance of reliable power supply for data centers and other critical environments. That's why we offer uninterruptible power supply (UPS) systems that provide backup power to ensure uninterrupted operations and maximum uptime for our clients.

How does a Smart UPS system work?

Smart UPS systems use sensors and other technologies to monitor the power supply and provide real-time data on power usage, energy efficiency, and system health. This data can help facility managers optimize their power usage, reduce energy waste, and improve system reliability. How can we help?

What is a modular UPS system?

Manufacturers are developing new UPS technologies, such as modular UPS systems, to provide high power density in a compact form factor. The demand for computing power and data-driven applications is also driving the need for more energy-efficient UPS systems.

We've compared these UPS devices across many factors, like their size, power supply, runtime, and battery recharging time. We looked at what types of environments they'd be best suited for...
