What is an off grid solar power system?

Off grid solar power system doesn't connect to the power grid. In general, it includes solar panels, charger controller, batteries and inverter. This system will store the solar power into the batteries, batteries energy will be converted the electricity power to supply the appliances working through the inverter.

How does a solar inverter work?

It converts DC (direct current) power generated by sources like solar panels into AC (alternating current) power, which can be fed back into the electrical grid or used to power appliances. These inverters synchronize the frequency and phase of the AC power with the grid's power to ensure smooth integration.
