How can a holistic approach improve battery energy storage system safety?

Current battery energy storage system (BESS) safety approaches leads to frequent failures due to safety gaps. A holistic approach aims to comprehensively improve BESS safety design and management shortcomings. 1. Introduction

What's new in energy storage safety?

Since the publication of the first Energy Storage Safety Strategic Plan in 2014, there have been introductions of new technologies, new use cases, and new codes, standards, regulations, and testing methods. Additionally, failures in deployed energy storage systems (ESS) have led to new emergency response best practices.

Is a holistic approach to battery energy storage safety a paradigm shift?

The holistic approach proposed in this study aims to address challenges of BESS safety and form the basis of a paradigm shiftin the safety management and design of these systems. Current battery energy storage system (BESS) safety approaches leads to frequent failures due to safety gaps.

Can energy storage systems be scaled up?

The energy storage system can be scaled up by adding more flywheels. Flywheels are not generally attractive for large-scale grid support services that require many kWh or MWh of energy storage because of the cost,safety,and space requirements. The most prominent safety issue in flywheels is failure of the rotor while it is rotating.

Can a large-scale solar battery energy storage system improve accident prevention and mitigation?

This work describes an improved risk assessment approach for analyzing safety designs in the battery energy storage system incorporated in large-scale solar, which can enhance accident prevention and mitigation through the incorporation of probabilistic event tree and systems theoretic analysis.

What are energy storage safety gaps?

Energy storage safety gaps identified in 2014 and 2023. Several gap areas were identified for validated safety and reliability, with an emphasis on Li-ion system design and operation but a recognition that significant research is needed to identify the risks of emerging technologies.
