Will a 50/60hz inverter work on a 60Hz power source?

A 50/60Hz compatible inverter can operate on 50Hz- and 60Hz power sources. We at Su-vastika have universal compatibility as far as 50 or 60 Hz frequency is concerned. Please check our models, where these products work on both frequencies automatically.

Are 3 phase inverters reliable?

These rugged inverters are extremely reliable, designed to provide many years of service in high shock, vibration, humidity, and EMI environments. Combining 3 inverters to form a 3 phase power system is optional. In this configuration, a 3 phase and neutral line is generated with precise synchronization.

What pF load should an inverter have?

It's pretty clean with 1.0 PFloads, but through on a switching power supply and the distortion goes up drastically. Essentially, the harmonics pollute the entire system, not just the circuit with the poor PF load. So ideally, the inverter should be almost as perfect a voltage source as possible.

2- Enter the battery voltage. It"ll be mentioned on the specs sheet of your battery. For example, 6v, 12v, 24, 48v etc. 3- Optional: Enter battery state of charge SoC: (If left empty the calculator will assume a 100% charged battery). Battery state of charge is the level of charge of an electric battery relative to its capacity.
