The DC power is then passed through the inverter which converts it to AC power. AC power is used by electrical appliances in the house. To use solar at night, you need to invest in a solar battery system. Solar batteries store the excess power produced by your solar system. You can then use the power in the battery at night.

Solar inverters are vital components of solar energy systems responsible for converting the direct current (DC) electricity produced by solar panels into alternating current (AC) electricity that can be used to power household appliances and electronics. Essentially, inverters act as the bridge between the solar panels and the electrical grid ...

As a rule of thumb, its best to choose an inverter that can handle the total wattage you need as well as the extra 20% safety margin.
