The flywheel energy storage system contributes to maintain the delivered power to the load constant, as long as the wind power is sufficient [28], [29]. To control the speed of the flywheel energy storage system, it is mandatory to find a reference speed which ensures that the system transfers the required energy by the load at any time.

Thanks to energy storage systems now we are capable of storing the energy to use it in critical moments (Díaz-González et al., 2012). As shown in Fig. 2, to pacify the power fluctuations, we should set an energy storage system to the back-to-back transformers in the DC-link, Fig. 3.
