As long as the amplitude of the "grid tied" solar inverter is taller ("higher voltage") the meter turns backward. When/if the grid goes offline. The 60Hz is gone, then the grid-tied inverter has nothing to sync with, the grid-tied inverter shuts down. The grid can turn of the solar panels by sending out a different frequency also.

The Inverter does not support off-grid functions in gridless areas. One meter cannot be connected to multiple inverters. Different CTs cannot connect to the same line cable. The on-Grid or backup side cannot be

connected to any AC generator directly. The inverter battery input must not be connected to incompatible batteries.
