Inverter to household lighting

What is an inverter used for in a home?

An inverter supplies clean, stable, and regulated power to safely run all kinds of appliances, including sensitive ones, in a home. It has a long battery life, high energy-efficiency, and features a smart overload regulation. During power cuts, this inverter switches to battery mode instantly, offering uninterrupted power supply.

How to choose a solar inverter?

Therefore the inverter must have the capacity to handle the power being generated from the panel/s. The size of your inverter should directly correspond to the size of your solar panels. For instance,if you have a 6 kilowatt (kW) system,your inverter should be around 6000W. Manufacturers usually have guidelines for pairing on their spec sheets.

Do you need an inverter for your home?

Whether you require an interrupted power supply in the form of a battery backup or a full solar system, an inverter is a must-have product. This article will help you select a high-quality inverter for your home, regardless of the power solution you choose, so you no longer have to lose your productive hours due to loadshedding.

How does a solar inverter work?

A single-phase inverter converts the DC power from your solar panels to a single phase of AC power to run your appliances. It has one active wire for electricity flow and a neutral wire connected to the earth at the switchboard. Conversely, a 3-phase inverter converts the DC power from solar panels to 3-phase AC output to power your appliances.

Do you need a solar inverter?

To maximise the outcome of a solar power solution, your solar panels need to be coupled with a quality inverter. Whether you require an interrupted power supply in the form of a battery backup or a full solar system, an inverter is a must-have product.

How many Watts should a solar inverter be?

For instance, if you have a 6 kilowatt (kW) system, your inverter should be around 6000W. Manufacturers usually have guidelines for pairing on their spec sheets. The manufacturer might void your warranty if you don't follow these guidelines and pair an inverter with solar panels outside of the restrictions on the guideline.
