### What are supercapacitors?

Supercapacitors or pseudocapacitors are the second type of electrochemical capacitors, which their storage mechanism is based on faradic process. In this kind of capacitors the energy storage is carried out via electron transferring followed by redox reactions.

#### When was a supercapacitor invented?

Engineers at General Electric first experimented with an early version of supercapacitor in 1957,but there were no known commercial applications. In 1966,Standard Oil rediscovered the effect of the double-layer capacitor by accident while working on experimental fuel cell designs. The double-layer greatly improved the ability to store energy.
