What are insulated gate bipolar transistors?

In a solar inverter, Insulated Gate Bipolar Transistors (IGBTs) are known as excellent solutions for converting a DC voltage generated from the solar array panels to AC voltage. The resulting AC voltage is used to power AC loads or various electrical equipment, or as in the case of a Photovoltaic (PV) inverter, to be fed into an AC grid.

What type of topology is used in a photovoltaic (PV) inverter?

The resulting AC voltage is used to power AC loads or various electrical equipment, or as in the case of a Photovoltaic (PV) inverter, to be fed into an AC grid. The most common topologies in an inverter are half-bridge and full-bridge utilized in single-phase systems, or neutral point clamped topologyemployed in 3-phase systems.

What is a BJT solar inverter?

The input is, therefore, voltage controlled, whereas the output is driven by the high current carrying capabilities of the BJT. The combination of these two functions enables high speed and low saturation voltage characteristics which, along with the built-in fast soft recovery diode, are ideally suited for solar inverter applications.
