Include all of the devices the UPS will need to support. If a piece of equipment has a redundant power supply, only count the wattage of ONE power supply. If you are unsure how many watts your equipment requires, consult the manufacturer or power supply specifications in the user manual. Here is an example of an equipment list to verify the load:

The power consumption of electrical equipment is stated in either Watts (W) or Volt-Amperes (VA). Because UPS systems are rated by VA or kVA ratings, this may require a conversion from W to VA, which can be

calculated by dividing the power consumption (W) by the power factor.
