

What is a solar micro inverter?

A solar micro inverter is a plug-and-play device used in photovoltaics, which converts direct current (DC) generated by a single solar module to alternating current (AC). Micro inverters contrast with conventional string and central solar inverters, in which a single inverter is connected to multiple solar panels.

What are the advantages of solar power micro inverter?

High reliability: Since the solar power micro inverter is directly integrated with the solar cell module, it is generally placed outdoors together with the solar cell module. Its working environment is harsh, and the micro-inverter is required to have high reliability.
