Do not expose the inverter to rain or moisture. Install the inverter in a dry and well-ventilated area. For best operating results, the inverter should be mounted on a flat surface. Mount as close as possible to the batteries. Try and keep the distance between the product and the battery to a minimum in order to minimize cable voltage losses.

Inverters with 400 watts are usually enough to charge small electric devices, such as phones or laptop computers. Still, it won"t be enough energy for items with more extensive amp needs, such as space heaters and power tools. Starter batteries (the main batteries in gas-powered cars and trucks) are not ideal for powering significant energy demands for extended periods of time.
