What type of battery do you need for a solar system?

Photo by Kris De Decker. The type of lead-acid batteryyou need for a small-scale solar system is a sealed lead-acid battery. If you use a 12V solar panel, you need a 12V battery. If you use a 24V solar panel, you need a 24V battery. Handle lead-acid batteries well because not doing so can ruin them quickly.

What is a small solar panel?

A small solar panel is usually designed not to be used on an extensive home solar system but for other uses. Most involve charging batteries to power small appliances and devices. Because they are smaller, they often have a harder wearing frame and may have an adaptation to make them more portable.

What batteries should be used for a small PV system?

For a typical small PV system (10Wp to 1kWp) both the initial investment cost and the life cycle cost has to be kept low and the following battery types can be recommended according to the order in brackets. (1)Solar Batteries,(2)Leisure/Lighting,(3)SLI truck batteries(ref. 2).

What voltage do solar panels come in?

Solar panels come in different voltages, usually 12V or 24V, sometimes 36V, 48V, or higher for grid-tied systems. For small-scale systems, 12V or 24V is what you want, especially to start with. You can also find small solar panels with voltages below 12V. People often ask which solar panels to buy, but there is little advice to give.
