method used for this purpose is limiting the export power: The inverter dynamically adjusts the PV power production in order to ensure that export power to the grid does not exceed a preconfigured limit. To enable this functionality, an energy meter that measures export or consumption must be installed at the site.

In the system described here, multiple inverters may be connected in an RS485 bus using the Modbus protocol for communication. The Export/Import meter is connected to the leader inverter via a PPC (Power Plant Controller), communicating via Modbus over TCP/IP. To achieve zero feed-in, the PPC de-rates the PV inverters and curtails their active
