#### What is pure sine wave inverter?

Pure sine wave inverter is a type of high-frequency inverterwhich is the most advanced and efficient type of inverter. They produce a smooth sinusoidal waveform that is nearly identical to the current supplied by the grid. This type of inverter is therefore ideal for sensitive electronic equipment that requires a stable power supply.

That being said, this isn"t always the case. As I mentioned earlier, typically, 110v units can only go up to 12,000 BTUs, whereas their 220v counterparts can go much higher. If you buy a 220v variant with higher BTU ratings, using it at full power will directly translate into more power consumption while the appliance is on.
