

A company specialized in uninterruptible power supply systems developed and manufactured in 2006 a system comprising a 400kVA UPS unit. The system was installed in a production facility manufacturing food packaging equipment and foil, located in northern Poland.

More than four billion dollars have, to date, been spent on Afghanistan's power infrastructure. And yet there are still considerable deficiencies, even in the country's capital, which has seen most of the investment - and most of the progress. At the same time, the demand for electricity is rapidly growing and the supply-demand gap has [...]

This Uninterruptible Power Supply Systems training course will explore the various types of static and dynamic UPS". Power outages are detrimental to the electrical network and installation systems. Thus, efficient uninterruptible power supply systems are needed to ensure their security, integrity and reliability.

When the input power fails, a UPS draws energy from its batteries, converts it to AC and delivers it to the load. A number of schemes for providing replacement power, called "topologies," are in common use. A "double-conversion" UPS, also called an online UPS, continuously converts incoming AC to direct current using an internal rectifier.
