Uninterruptible power supply rated power

The power consumption of electrical equipment is stated in either Watts (W) or Volt-Amperes (VA). Because UPS systems are rated by VA or kVA ratings, this may require a conversion from W to VA, which can be calculated by dividing the power consumption (W) by the power factor.

An Uninterruptible Power Source (UPS) is a vital tool for ensuring continuous power supply during outages, power surges, or fluctuations. Whether for your home electronics or business-critical systems, choosing the right UPS ...

The rectifier/charger unit shall be provided with the feature which does not allow input power required to go beyond 20% of the rated load upon resumption of AC power after operation of UPS on batteries. Include all of the devices the UPS will need to support. If a piece of equipment has a redundant power supply, only count the wattage of ONE power supply. If you are unsure how many watts your equipment requires, consult the manufacturer or power supply specifications in the user manual. Here is an example of an equipment list to verify the load:

Some uninterruptible power supply (UPS) systems are rated in kilowatts (kW) and others in kilo-volt-amperes (kVA). KW and kVA simply mean 1,000 watts (W) or 1,000 volt-amperes. The basic rule of physics that watts = volts x amps is based on direct current circuits .
