The inverter must be sized appropriately to handle the amount of power and voltage needed to run a 1 HP water pump. 1 HP = 750W That means a 1 HP water pump requires at LEAST 750 watts of solar power to run, but to run effectively throughout the day a few hundred more watts should be added.

Pump: The 2.2 kW pump 220V or 380V. Its maximum head is 127 meters. The flow rate is 6 m³/h @83meters, which meets the requirement. Note: As the 380V pump & inverter required higher voltage input, which may result in power wastage when connected to solar panels, we suggest to choose a 220V pump instead.
