What is a 12 volt inverter?

An inverter is a device that turns the power from a 12 volt DC battery, like the one in your car or truck, into the 120 volt AC power that runs all of the electronics in your house. You can use one of these devices to power all sorts of devices in your car, but it's important to figure out how big of an inverter you need first.

How much power does an inverter use?

An inverter uses a small amount of energy during the conversion process. The difference between the input power and the output power is expressed in percentages. The efficiency of modern inverters is more than 92 %. This means that a maximum of 8 % of the power consumption is used to convert battery voltage to 230V/50Hz.

How to choose the capacity of an inverter?

The capacity of an inverter should be chosen based on the total power requirement of the devices it will be powering. If the total power requirement exceeds the inverter's capacity, it may fail or damage the connected devices.
