

What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges from the grid or a power plant and then discharges that energy to provide electricity or other grid services when needed.

How do energy storage batteries work?

In the energy storage system, the energy storage lithium battery only interacts with the energy storage converter at high voltage, and the converter takes electricity from the AC grid to charge the battery pack; or the battery pack supplies power to the converter, and the electrical energy is supplied by the converter.
